

How BPA and its customers save energy

BPA meets the energy-efficiency goals of the Pacific Northwest Electric Power Planning and Conservation Act by working with and through its electric utilities to acquire energy efficiency. Energy Efficiency is the second largest power resource in the Pacific Northwest.

Since 1982, BPA and its electric utility customers saved more than 2,357 aMW* of electricity through energy efficiency. These energy savings are equivalent to:

1.87 T
Charged smart phones.

or

1,720,610
Northwest homes powered for a year.

In fiscal year 2020, BPA and its utility customers saved approximately **58 aMW**. Thanks to energy efficiency programs, Northwest residents enjoy comfort and convenience, lower electric bills, cleaner air and a stronger economy.
